

Mold Consultants in North Carolina

This list was compiled from the American Council for Accredited Certification and the Indoor Environmental Standards Organization internet sites. These non-profit organizations have established training and certification standards members must fulfill in order to join. Although there are other individuals, firms, or organizations that may be able to provide you with the services you need, we have limited this list to these two organizations. The Craven County Health Department makes no recommendation, regardless of inclusion in this list.

<http://www.acac.org/>

The American Council for Accredited Certification (ACAC) promotes awareness, education and certification for professionals. Our mission is to establish credible certification programs that provide value to certificants, their clients and the public. It is our goal to serve the public interest with integrity as an independent certifying body. The ACAC offers the only third-party designations dedicated to the field of indoor air quality. Though its board-awarded designations meet all these requirements and more, the same cannot be said of many other professional certification programs. Other organizations allow office staffers to grant certification in exchange for payment of fees and passing a simple examination based on a mandatory course with limited information. Field experience is rarely required, much less verified. As a result, "instant certifications" from such organizations are nearly worthless when challenged in court.

IAQ Council-certified professionals are experienced in one or more disciplines related to indoor air quality, including environmental investigation and consulting, microbial investigation and consulting, microbial remediation, residential mold inspection, IAQ administration and microbial claims adjusting.

To earn their designations, Council-certified professionals undergo the most stringent examination and review process in the IAQ industry. To maintain their designations, Council-certified professionals participate in the most rigorous recertification program in the IAQ industry.

Indoor Environmental Standards Organization

<http://www.iestandards.org/index.aspx>

Indoor Environmental Standards Organization is a non-profit organization that provides a national forum for the development and publication of voluntary consensus standards for the assessment, remediation and management of indoor environments. As an American National Standards Institute Accredited Standards Developer, IESO's mission is to be the foremost developer and provider of voluntary consensus indoor environmental quality standards, related technical information, and services having recognized quality and applicability that promote public health and safety, and the overall quality of life.
